Android file transfer mac keeps crashing. What to do if android file transfer is not working. How to transfer files from mac to android using android file transfer. Android file transfer crashing on mac. Android file transfer keeps crashing. Why won't my android file transfer work.

Unlock more from the Firefox suite: Sync, Monitor, Relay and more. Start Now There is a known issue that will cause Firefox to crash when you send files using an encrypted file transfer service while FPN is on. This is a known issue that will be fixed in an upcoming release. In the meantime, turning off FPN while you're doing the file transfer should prevent Firefox from crashing: Click the Private Network button on the toolbar to open the panel. Click the slider to turn it on or off. These fine people helped write this article: I am not sure if there is a problem with MIUI 11 EU rom version, but after installed it. When I try to transfer any files, doesn't matter the kind and size, Android File Transfer application in Mac stop transferring saying "Can't access device storage" and I need to change the Charging type option on Mi 9 (or unplug and plugging again the USB cable), quit completely from AFT application and start again. It's more common when I try to tranfer a few of hundred MB, forget it about 1 GB. With MIUI 11 China stable rom and MIUI 10 I haven't this problem, I transfer around 15 GB at once attempt without any problem (same original cable, same USB port and computer, etc). Is there any other mac application recommended for transferring securely big and lot of files? Maybe you can try other way to help you transfer files from your xiaomi phone to Mac. Pro Android Assistant for Mac tool can help you access to all files on your xiaomi phone and export them to Mac via usb cable directly. Just have a try and good luck to you. I often use MobiKin Transfer for Mobile to transfer files between different,which can copy data from one device to another mobile phone without restrictions. All transmission can be done with 1 simple click and risk-free. It has both Win&Mac version,you can try it. Google developed the free Android File Transfer app to help you get files off your Android phone and onto another device, including your Mac. That process can be finicky at times, so here's how to fix it if Android File Transfer for Mac is not working correctly. Often when you're having trouble with Android File Transfer, the phone is not in the proper mode to transfer files. Other causes include bad cables or USB ports. Sometimes, third-party software can interfere with the proper operation of the Android File Transfer app. Sometimes a computer that is not running the latest software can have trouble. There are many troubleshooting steps you can try to resolve this issue. You'll also need to re-launch the Android File Transfer app most of the time. To do so, close the app or error message, then click Applications > Android File Transfer. Here are the steps you can try in order of the most likely to succeed. Put your phone into File Transfer Mode. When Android File Transfer fails to connect, the phone is not set up to transfer data correctly. When an Android phone is plugged into a USB port, most phones default to just charging. It happens regardless of what USB port the phone is plugged into, whether it is a computer USB port or a wall charger. The process is similar on most Android phones, though as always, you may need to follow a slightly different path. Swipe down your notification shade and tap Android System - Charging this device via USB > Tap for more options > File Transfer/Android Auto. Check your USB Cable. Often, your USB cable can be to blame. Check the length of your cable for cuts, frays, or bends in the connectors. Alternatively, you can try a different cable to see if you have better results. Try a different USB port. Sometimes if a USB port isn't working quite right, it can cause trouble with this process. Switching to a different port might give you better results. Reboot your phone/Mac/both. It's a clich  , but it works. Try powering off your phone or Mac or both and turning them back on. Update macOS. If you haven't updated your Mac's software in a while, try making sure you have the latest updates to the operating system. It's always a good idea to make sure you're using the latest and greatest software. Reinstall Android File Transfer. It's always possible that the app itself has become damaged or corrupt. In that case, drag the app into the trash and reinstall it from the website listed above. Uninstall Kies or Smart Switch. Those using older Samsung phones may have previously installed Kies or Smart Switch. Samsung apps that perform similar tasks like file management. Unfortunately, that software can interfere with the proper operation of Android File Transfer. Look for them in the Applications folder and if you find them, drag them to the trash. Turn on USB debugging. USB debugging is a developer mode for Android that opens up a lot of functionality that isn't otherwise consumer-facing. Some phones may have file transfer hidden behind developer options, so this can be an excellent route to try. Use a different Android file transfer app. Android File Transfer isn't the only game in town. There are other options. Apps like Dr. Fone and Anydroid can be purchased for \$30-\$40 and can handle file management, photos, contacts, backups, etc. Open MTP is an open-source option you can download from Github. It's free, but it's a nerdy option for those who can handle pulling a Github repository. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Android Data Transfer is a dedicated app that allows users to transfer files between Mac and Android smartphones. For most users, it's an intuitive and efficient program but sometimes, it just stops working for no apparent reason.It can be quite frustrating for anyone to experience the Android File Transfer Mac not working issue. That's why we are here with a list of several proven ways to fix this problem permanently and get your devices talking once again.Let's dive in!It is difficult to pinpoint the exact causes of why Android 10 File Transfer not working. However, the experts believe that the below reasons can make this app become unresponsive on your Mac.Possible ReasonsFile Transfer is disabled on your Android phone or tablet.The USB cable you're using to connect both devices is damaged or malfunctioning. Similarly, it can be an issue with the USB port on your Mac. So, try using another port or change the cable to confirm.Compatibility issues between your Mac and Android smartphoneAny other Android data transfer service like Samsung Smart Switch or Samsung Kies is hindering Android File Transfer.Sometimes, the pending software updates on a Mac can also lead to the Android File Transfer not working.Now that you know the common causes of why Android File Transfer won't work, let us discuss how to remedy the issue. Just implement the below solutions and hopefully, one of them will help you troubleshoot the issue.1.Enable File Transfer ModeFirst and foremost, you have to enable the File Transfer mode on your Android phone. Generally, when you connect both devices via a cable, the Android device is just charging by default.To fix this,Swipe down or up the notification shade on your phone and tap Android System - Charging this device via USB.Then, tap More options and enable the File Transfer/Android Auto feature and confirm if Android File Transfer is working or not.2.Restart the DevicesTry to restart both your Android phone and Mac. Often, Android File Transfer does not work due to a temporary glitch or bug in any of the devices, and restarting them is a great way to get rid of it.If the issue persists after restarting, jump to the next solution.3.Reinstall Android File TransferMany a time, there's a temporary bug in the app itself that hinders the connection between your devices. The easiest way to get rid of it is by reinstalling the app.Just delete Android File Transfer from the Android phone and install it again from the Play Store. Login to your account and try connecting it with your Mac.Hopefully, you won't face the issue again. But if it is still not working, then implement the next solution.4.Uninstall Other Third-Party AppsIf you're a Samsung user, chances are your device may have pre-installed apps like Samsung Smart Switch or Samsung Kies. These programs perform the same function of file transfer and management and often, interfere with the regular operation of Android File Transfer.So, try deleting these apps to fix the Android File Transfer mac not working Samsung S3 issue. Look for them in the Application folder and remove them from your Samsung smartphone. 5.Update macOSLast but not least, try updating the software of your Mac to the latest version. The process is simple and takes just a few minutes to complete. Here's how to do that:Click on the Apple icon in the upper-left corner and go to System Preferences > Software Update.If the update is available, hit Update Now and wait until the process is completed.Android File Transfer is a handy service but it comes with limited features. Not to mention, users continue facing unexpected delays and breakdowns while using this app.Given this, we will outline the two perfect alternatives that will save you from the Android File Transfer on mac not working issue. When it comes to the best and most comprehensive software to transfer data between Android and Mac, then AirDroid Personal stands out. It is designed specifically to allow users to share unlimited files across multiple platforms.The best thing about AirDroid Personal is its ability to transfer data at a blazing speed with just a few clicks. All you need is a healthy Wi-Fi connection to get the job done.Transfer unlimited files between Android and MacShare files without compressing themUsers can send all types of files irrespective of their sizeAllows you to transfer files wirelesslyProsVery easy to useCross-platform support: compatibility with iOS, Android, Mac, and WindowsShare links, texts, and even clipboards between any two devicesFollow the below steps to transfer files between Mac and Android smartphones.Step 1. Install AirDroid Personal Mobile Client on both devices and log in with the same AirDroid account.Step 2. To transfer files from Mac to Android, launch AirDroid Desktop Client, click on the Transfer icon, and choose your Android device. Now, drag and drop any file you want to share.Step 3. To transfer files from Android to Mac, open the AirDroid Personal App.Step 4. Go to My Devices, select your Mac, tap the Attachment option, and select the files you what to send.SHAREIt is another popular app to transfer data between your Android phone and Mac wirelessly. Although the program has several limitations it does help you transfer unlimited data with a certain degree of competence.It has no file size limits and provides an intuitive way to share data across both Android and iOS platforms. But expect slow data processing and a lot of ads while using it.Key FeaturesProvides a direct device-to-device connection with a maximum speed of 20 MbpsOffers a wireless transfer; no need for a Wi-Fi or mobile dataComes with many entertainment features including music and moviesFast data transferNo registration is required to start using itProvides a free versionBombards with adsSlows down or even stuck during the transfer processThe interface is quite trickyThe premium version, priced at \$9.99, is very expensiveStep 1. Make sure both Android and Mac are running on the same Wi-Fi network and launch SHAREIt on your Mac.Step 2. Then, open the app on Android, tap Menu, and choose Connect Mac/PC.Step 3. When it detects the Mac, tap on its name to connect both devices.Step 4. The file transfer window will open and you can start sharing files right away.To sum up, this article has provided a comprehensive guide on how to fix the Android File Transfer not working problem.
